- CCI is completely configurable allowing it to be integrated easily into any retail cash flow process. Supplied with Ethernet, Bluetooth, USB or RS232 serial link it can also be linked in to POS and store network

In an ideal world, once cash has been handed over from the customer to the retailer, 100% of this money should find its way quickly and directly into the retailer's bank account. Unfortunately, this is not always the case. Volumatic's CCI is a unique cash validation and storage device that can help protect and secure cash at all stages of its journey from the consumer to cashier, to back office, to armored car, and finally to the cash center and bank.
